

Dmitrii Malashikhin

Data Engineer

New York, NY | 646-671-4652 | jobs@malashikh.in | linkedin.com/in/themdq | github.com/themdq

Professional Summary

Data Engineer with 3+ years of experience building production data pipelines, ETL/ELT workflows, and analytics-ready datasets. Improved source onboarding by 88% (1-2 days to 3 hours) and increased automated test coverage to 96%. Strong hands-on experience with Python, SQL, Airflow, dbt, Snowflake, PostgreSQL, AWS, Docker, Kubernetes, CI/CD, and data quality automation.

Technical Skills

Languages: Python, SQL, Bash

Data Engineering: ETL/ELT, Airflow, dbt, Prefect, Pandas, Kafka, Data Modeling, Schema Design, Data Quality, Batch Processing, Orchestration

Databases & Warehouses: PostgreSQL, Snowflake, Elasticsearch, MongoDB, Redis

Cloud & Infrastructure: AWS (ECS, Lambda, S3, RDS), Docker, Kubernetes, GitHub Actions, GitLab CI/CD

APIs & Observability: REST APIs, FastAPI, Pydantic, Prometheus, Grafana, ELK Stack

Work Experience

Data Engineer, R-Vision (cybersecurity vendor, EMEA) | **Oct 2023 - Jan 2026**

- Owned a high-throughput ELT ingestion platform using Python, FastAPI, Airflow, and S3-compatible object storage across 30+ vendor feeds and hundreds of production data products.
- Built reusable Python ingestion frameworks with Pydantic schema validation, source-specific configuration, and a JSON Patch API, cutting new-source onboarding from 1-2 days to ~3 hours (-88%).
- Defined and enforced schema contracts and enrichment mappings across structured and semi-structured vulnerability datasets, improving data consistency and enabling downstream analytics use cases.
- Reduced full rebuild time to ~5 minutes by adding content hashing to skip unchanged records and support diff-based downstream verification.
- Increased unit and integration test coverage from ~70% to 96% with pytest and CI/CD quality gates, reclaiming 40+ engineering hours per month in manual verification.

Data Engineer, Datagile (cybersecurity vendor, large-scale energy sector) | **Aug 2022 - Oct 2023**

- Built and maintained 10+ paid production integrations, designing normalization and parsing rules for heterogeneous event sources with Python, PostgreSQL, RabbitMQ, and Elasticsearch.
- Developed a template-driven rule authoring tool that cut normalization development time by ~2x and improved consistency across integrations.
- Replaced a 6-step manual release process with automated GitLab CI/CD pipelines, tests, and rollback, reducing production incidents by ~65% and documentation complaints by ~33%.
- Built packaging utilities adopted by 50+ engineers, saving ~15 minutes per engineer per day and reducing repetitive manual work across release workflows.

Projects

Vulnerability Intelligence Pipeline | Python · Prefect · dbt · Snowflake · Streamlit · AWS RDS

- Built and deployed a production ELT pipeline on AWS ingesting CVE data via REST/JSON API with Prefect automation, retry/backoff logic, and idempotent upserts; modeled analytics-ready datasets in Snowflake with dbt staging and mart layers.
- Shipped a live Streamlit dashboard for data freshness and quality monitoring.

Education

Master of Science in Information Systems, Admiral Makarov State University | Sep 2022 - Jul 2024

Bachelor of Science in Computer Science, Admiral Makarov State University | Sep 2018 - Jun 2022
